- Microsoft Word, Excel, Powerpoint.
- Google drive, Dropbox.
- (Music related) Sibelius, Logic Pro, Garage Band, Finale, Final cut pro, Ableton.
- Zoom, Facetime, Google hangout.

Projects

- **Mars Travel Agency**

With commercial space travel on the horizon, it seemed like a fun idea to mock up a one stop portal to get information on weather, potential launch stations, and to book a flight to mars and generate that booking info into a ticket. Built with React and many other frameworks.

- **Pokemon-TCG-App**

For this application, we wanted to display different images from an api. Depending on the route, log in status, session, etc, we wanted to dynamically show information to the user.

We settled on Pokemon, since we all grew up watching and loving the franchise.

The Pokemon data was referenced from the [Pokémon TCG Developers API]

- **Weather Dashboard**

This weather dashboard application was made using HTML, CSS, JavaScript (jQuery), third party API's and moment.js. The third party API used to get data about the weather was One call API and Current Weather Data API from <http://openweathermap.org>. Incorporated functions are as follows:

* Search bar that saves search history to local storage and adds it to a search history list with a clear button which is clickable and will take you to that previously searched city.

* Current weather of searched city which contains a UV index badge which changes color based on if the UV index is safe, moderate, severe.

* Five day forecast which is 5 cards generated in a for loop which reset with every new search.

* The default city is Philadelphia, in order to show no blank sections when there is no previously searches or local storage is empty.
